

## Digital Sovereignty: One Data Calls for Serious Examination of European Alternatives to Palantir

In the current debate about the use of U.S. software Palantir by German authorities, One Data emphasizes that there are powerful, secure, and data protection-compliant alternatives from Germany. CEO Andreas Böhm calls on policymakers and public administrations to provide stronger support for domestic solutions.

**Passau, August 2025** – The software company **One Data** is urging policymakers and public administrations to take Germany's digital sovereignty seriously and to rely on European alternatives when selecting analytics platforms. With its platform, One Data offers a solution that guarantees data protection, transparency, and full data sovereignty—representing a genuine alternative to Palantir.

### Andreas Böhm, CEO of One Data, explains:

"It is long overdue for Germany not only to demand digital sovereignty but also to implement it. With One Data, we have created a platform that can connect data sources from a wide range of systems—securely, transparently, and fully under government control. We use open standards and modular interfaces, ensuring that authorities retain full data sovereignty at all times. Anyone who continues to claim that there is no alternative to Palantir is ignoring reality and undermining trust in government IT systems."

One Data is calling on policymakers to finally take concrete steps to reduce dependency on monolithic U.S. systems. This requires binding legal requirements that prioritize digital sovereignty and European solutions in public tenders, transparent and fair procurement procedures that foster competition and innovation, and targeted support for domestic providers. Only in this way can Germany ensure an independent, data protection-compliant, and future-proof IT infrastructure for security and public administration.

### About One Data

One Data is a German software company specializing in data product management. Founded by Dr. Andreas Böhm, the company employs over 150 people from more than 30 nations across four offices.

One Data empowers business and data teams to collaboratively build and manage data products across their entire lifecycle. Its platform, the Data Product Space, transforms fragmented data into trusted, AI-ready products that drive real business value. By supporting every stage of the data product lifecycle — from discovery to scale — One Data helps organizations gain insights faster, reduce costs, and improve governance. With seamless integration into existing data stacks and built-in features for quality, compliance, and automation, it breaks down silos and builds trust in data. One Data bridges the gap between data experts and business users, empowering everyone to build and share data products efficiently. The result: more resilient supply chains, faster R&D, more accurate forecasts, and stronger data teams.
